INTENTIONAL RESPONSIVE INCLUSIVE EXPERIENCE: CHILDREN PLAN

The use of Artificial Intelligence on any aspect of this plan breaches the Faculty of Health and Life Sciences Academic Integrity Policy

Date: Feb 04, 2026 Learner's Name: Dron Lakhanpal

Learner's ID#: N01727842 Field Advisor's Name: Anna Burgin

Mentoring Educator's Name: Rachel Wagner

Placement Site Name: kenollie Public School

DETAILED OBSERVATION
USE POINT FORM
(Step by step what did you see? What did you hear?

Address: WHO? Example Child A (age), educator A
WHEN? date, time of day
WHERE? Indoor, outdoor, learning areas of the classroom
WHAT? what did the children do and what did they say

YOU MUST RECORD ENOUGH DETAILED STEP BY STEP OBSERVATION IN ORDER TO COMPLETE A WELL THOUGHT OUT INTENTIONAL RESPONSIVE OBSERVATION

YOUR WORK MUST BE TYPED ON THIS DOCUMENT. USE AS MUCH SPACE YOU NEED TO ANSWER THE PROMPTS IN EVERY QUESTION IN EACH SECTION OF THIS PLAN.

ENSURE YOUR OBSERVATION IS:

- objective (measurable facts only);
- written in the past tense;
- written in third person;
- uses gender neutral pronouns (e.g., they/them);
- ensures the anonymity of the people observed (e.g., Child A/Educator A).
- uses language that is specific

- **DO NOT USE** it seems..., it appears...,
- **DO NOT** use developmental language here.

- **Approximately 150 words**
- **COMPLETE THIS SECTION IN POINT FORM:**

Address: Child A (7), Child B (6), Child C (7), Educator A, Educator B
When: Wednesday, 8:00 a.m., morning program time
Where: Indoor Auditorium setting, table-top area

- Three children sat at a rectangular table with red plastic stacking cups.
- Educator A placed the cups in the center of the table.
- Educator A said, “Let’s see who can build the pyramid the fastest.”
- Educator A counted down, “3, 2, 1, go.”
- Child A began stacking cups vertically to form a pyramid shape.
- Child B spread the cups out before stacking them into a triangle formation.
- Child C stacked cups quickly and adjusted the bottom row after it shifted.
- Child A said, “Mine is faster!” while repositioning the cups.
- Child B knocked over their stack and immediately restarted.
- Child C said, “Wait, start again!”
- Educator A initiated another countdown for a second round.
- The children repeated the challenge multiple times, stacking and restacking the cups.
- The activity continued for approximately 10 –20 minutes.

INTERPRETATION
(What do you think it means?)

Address: Why?

Your interpretation:
- Is based on your observation.
- Is subjective
- Uses sentences that start with “It appears...”, “it seems...”, “According to my observation...), etc.

Note: Complete the following in point form:

- **What are the children’s interests, questions, curiosities, experimentations and their development? How do you know, must give examples from the observation?**

- According to my observation, the children appeared highly interested in competitive building challenges.
- It appears they were motivated by speed, as they responded immediately to the educator’s countdown.
- The children demonstrated curiosity about how to make their structure more stable after it collapsed.
- Their repeated requests to “start again” suggest interest in refining their approach.
- It seems the children were engaged by the idea of “winning,” as they compared their pyramids verbally.
- The children showed persistence by rebuilding immediately after their cups fell.
- The competitive structure encouraged experimentation with different stacking techniques.

Consider the use of the environment as a teacher, ’What role did the following factors play in what you observed”
Consider the following (e.g., **enhance and/or limit play**)?

- **Space; (location, amount of space)**
- The table-top area provided a contained space that supported focused building.
- The limited surface area required children to adjust cup placement carefully.

- **Materials; (types/properties)**
- The plastic cups were lightweight and unstable, which required balance and precision.
- The uniform size of cups allowed for structured pyramid formation.

- **Time; (time of day, duration of experience)**
- The activity took place on Wednesday, February 4, 2026, at approximately 8:00 a.m.
- The experience lasted approximately 20 minutes.
- The morning timing supported active participation and repeated engagement in the challenge.

- **The role of the educator; (as an observer; facilitator; co-learner etc.)**
- I acted as an observer during the activity

Consider the image of the child as "competent, capable of complex thinking, curious and rich in potential" (OMEd, 2014a, p. 6):

- Describe one (1) **strength** derived from *Excerpt's from E.L.E.C.T.'s* (OMEd, 2014b) continuum of development example as follows:
  - **Choose only one of the following developmental domains (**physical, cognitive, social/ emotional, communication, language and literacy), **skill reference #** and provide evidence from your observation to support your choice

Cognitive Domain – 4.2 Problem Solving

During the stacking challenge, the children rebuilt the cup pyramid after it collapsed and adjusted their stacking methods during repeated attempts. They demonstrated problem-solving by modifying the base structure and trying different strategies to complete the challenge within the countdown.

- Describe **1 one opportunity for growth** derived from either your Development Courses (114, 124 and 244) or *Excerpt's from E.L.E.C.T.'s* (OMEd, 2014b) continuum of development example as follows:
  - **Choose one of the following developmental domains (**physical, cognitive, social/ emotional, communication, language and literacy), and **one skill reference #.** and provide evidence from your observation to support your choice.

Social Domain – 1.3 Managing Behaviour

The competitive structure of the activity provided opportunities for children to further develop skills in managing behaviour during timed challenges, particularly when restarting after the structure collapsed.

FULLY DETAILED, INTENTIONAL RESPONSE INCLUSIVE EXPERIENCE
(What will you do?)

Collaborate with your Mentoring Educator about your plan. Get their feedback and approval. Communicate and share your final plan with your Mentoring Educator and have them sign this section before implementing the planned experience the following week.

YOU MUST RECORD ENOUGH DETAILED STEP BY STEP PLAN IN ORDER TO COMPLETE A WELL THOUGHT OUT LESSON

Complete the following section in point form

Reflect and describe the following:

- **Give your Intentional Responsive Inclusive Planned Experience a title/name**
  -Valentine Name & Pattern Bracelet Creation

- **What will you do? Your plan must show the step-by-step process of the experience and list the materials used**
  -Set up alphabet beads, colored beads, and elastic string on the table.
  -Model how to begin the bracelet and tie a starting knot.
  -Invite children to spell a family member's name and choose bead colors that represent feelings (love, happ, kind).
  -Support letter sequencing and assist with tying the final knot.
  -Invite children to share who their bracelet is for and why.

- **When will you do it? Why? Time/Duration:**
  Date: Wednesday, February 11, 2026
  Time: 3:45 p.m.
  Duration: Approximately 15–20 minutes
  This time was chosen because it takes place during indoor program time when children are settled and able to engage in a focused small-group activity before transitioning to the next routine.

- **Where will you do it? Why?**
  -The experience will take place at the classroom table area.
  -The table setting provides a structured space for small-group interaction and supports fine motor focus while minimizing distractions

Reflect on the following:

- **How does your intentional responsive inclusive experience connect to your observation and interpretation? Refer to the:**

- **Interests(s)**
  -During the cup stacking activity, children showed strong interest in structured challenges and goal-oriented tasks.
  -They responded positively to timed activities and competitive elements.
  -The Valentine bracelet activity builds on their interest in completing a task with a clear outcome (finished bracelet).

- **strengths,**
  -Children demonstrated cognitive problem-solving skills when building pyramids under time pressure.
  -They showed persistence and focus while attempting to stack cups correctly.
  -The bracelet activity extends this strength by requiring sequencing letters and planning patterns.

- **opportunity for growth you identified in your interpretation.**
  -In the cup challenge, children focused heavily on speed and competition.

- The bracelet activity provides opportunity to shift toward collaboration, emotional expression, and thoughtful decision-making rather than speed.
-It supports deeper reflection on relationships instead of competition.

- What role will you, as a co-learner, have in your planned response? **Identify one (1) teaching strategy** (see Blackboard site for the list) you will use and describe how it relates to the observed interest, strength and opportunity for growth identified in the interpretation.
  Name the Teaching strategy and description:

  Teaching Strategy: Scaffolding

  -I will model how to begin the bracelet and locate letters when needed.
  -I will provide prompts such as, "What letter comes next?" to support independent thinking.
  -I will gradually reduce assistance as children gain confidence.

- How is your experience/plan responsive inclusive? **Discuss one (1)** of the following Foundations for Learning from *How Does Learning Happen?* (OMEd, 2014a): **Indicate which foundation you are connecting your plan to. Your work must be paraphrased, you must site your work and include the page number.**

  Belonging (How Does Learning Happen?, 2014, p. 24)

  -This experience supports belonging by encouraging children to recognize and celebrate important relationships in their lives.
  -Children are provided choice in color, name selection, and bracelet design, ensuring participation at individual ability levels.
  -The activity allows multiple entry points, supporting different literacy and fine motor abilities.

- **Must include at least 1 photo** (before, during, or after) of the experience.

Before

During

After

SIGNATURE REQUIRED HERE FROM MENTORING EDUCATOR, PLAN IS REVIEWED AND APPROVED FOR IMPLEMENTING NEXT PLACEMENT DAY:
Mentoring Educator's Signature: _____

Date Signed: _____
A grade of 0 will be given in the **Planned Response**, if the Mentoring Educator does not sign this section.

REFLECTION ON THE EXPERIENCE
(What happened?)

This follow-up Reflection on Experience extension is based on what happened when you implemented your initial experience. What have you learned and what you will do next to extend your initial planned experience?

Complete the following section (point form is acceptable):

Reflect on the following:

- **How did your planned response support your anticipated focus? Refer to the interests(s), strength and opportunity for growth you identified in your interpretation.**
- The planned response supported children's interest in Valentine's Day by allowing them to create bracelets for someone meaningful.
- It extended the strength observed in sequencing and structured play (from the cup/pyramid activity) by applying sequencing to letter arrangement.
- It supported the opportunity for growth in expressive language and intentional decision-making through color and word selection.

- **What happened when you implemented your experience?**
- Children selected beads and began spelling names of family members.
- Some children asked peers how to spell certain names.
- Children discussed why they chose specific colors (e.g., "My mom likes purple.").
- Most children remained engaged for the full duration

- **What did you learn?**
- Children were motivated when the activity connected to someone personally meaningful.
- Some children required support with letter sequencing and knot tying.
- Open-ended prompts increased verbal sharing.

- **What are some things you did to present new challenges to the child/children, as you were interacting with them?**
- Encouraged children to add a word (e.g., "LOVE," "BEST," "HAPPY") instead of only a name.
- Asked children to create a repeating color pattern instead of random selection.
- Prompted children to explain their choices to peers.

MENTORING EDUCATOR'S FEEDBACK
A grade of 0 will be given if the initial experience is not implemented to the children in the classroom.
PRINT THIS DOCUMENT FOR THE Mentoring Educator's Feedback and Signature for this section. ❑ **Yes, learner implemented the experience** ❑ **No, learner DID NOT implement the experience**   **Mentoring Educator's Signature: _____ Date: _____**
