INTENTIONAL RESPONSIVE INCLUSIVE EXPERIENCE: OUTDOOR

The use of Artificial Intelligence on any aspect of this plan, breaches the Faculty of Health and Life Sciences Academic Integrity Policy

Date: March 04, 2026 Learner's Name: Dron lakhanpal

Learner's ID #: N01727842 Field Advisor's Name: Anna Burgin

Mentoring Educator's Name: Rachel Wagner

Placement Site Name: Kennolie Public School

DETAILED OBSERVATION
USE POINT FORM
(Step by step what did you see? What did you hear?

Address: WHO? Example Child A (age), educator A
WHEN? date, time of day
WHERE? Indoor, outdoor, learning areas of the classroom
WHAT? what did the children do and what did they say

YOU MUST RECORD ENOUGH DETAILED STEP BY STEP IN ORDER TO COMPLETE A WELL THOUGHT OUT OBSERVATION

YOUR WORK MUST BE TYPED ON THIS DOCUMENT. USE AS MUCH SPACE YOU NEED TO ANSWER THE PROMPTS IN EVERY QUESTION IN EACH SECTION OF THIS PLAN.

ENSURE YOUR OBSERVATION IS:

- objective (measurable facts only);
- written in the past tense;
- written in third person;
- uses gender neutral pronouns (e.g., they/them);
- ensures the anonymity of the people observed (e.g., Child A/Educator A).
- uses language that is specific

- **DO NOT USE** it seems..., it appears, according to etc...,
- **DO NOT** use developmental language here.

- **Approximately 150 words**
- **COMPLETE THIS SECTION IN POINT FORM:**

Address: Child A (7), Child B (6), Child C (7), Educator A
When: Wednesday, March 4, 2026 – approximately 8:00 a.m., morning program time
Where: Indoor gym setting during active play

- Three children stood in the gym area with a soft soccer ball placed between them and the educator.
- Educator A stood in front of the goal area acting as the goalkeeper.
- Child A kicked the soccer ball toward the educator while the other children waited for their turn.
- Educator A stopped the ball and rolled it back to the children.
- Child B kicked the ball harder and said, “This time it will go in.”
- Child C watched the movement of the ball and adjusted their position before kicking.
- The educator encouraged the children by saying, “Try again and aim for the corner.”
- The children took turns kicking the ball and laughed when the educator blocked the shot.
- Child A attempted another kick and said, “I almost got it!”
- The activity continued with children repeating turns, kicking and adjusting their force and direction.

INTERPRETATION
(What do you think it means?)

Address: Why?

Your interpretation:
- Is based on your observation.
- Is subjective
- Uses sentences that start with “It appears...”, “it seems...”, “According to my observation...), etc.

Note: Complete the following in point form

- What are the children’s interests, questions, curiosities, experimentations and their development? How do you know, **must give examples from your observation?**

- According to my observation, the children appeared interested in active movement games involving kicking and aiming.
- It appears the children were motivated by the challenge of scoring a goal against the educator.
- The children experimented with different levels of force and direction while kicking the ball.
- The repeated attempts suggest curiosity about how their movements affected the direction and speed of the ball.
- The children showed excitement when they came close to scoring, indicating engagement in the challenge.

Consider the use of the environment as a teacher, ’What role did the following factors play in what you observed Consider the following: (e.g., **enhance and/or limit play)**?

- **Space; (location, amount of space)**
- The gym area provided a large open space that allowed children to move freely and kick the ball safely.
- The open environment supported active movement and turn-taking during the activity.

- **Materials; (types/properties)**
- The soft soccer ball allowed children to kick, roll, and control movement safely indoors.
- The lightweight ball encouraged repeated attempts and experimentation with force.

- **Time; (time of day, duration of experience)**
- The activity occurred during the morning indoor program time at approximately 8:00 a.m.
- The experience lasted about 15–20 minutes and allowed multiple turns for each child.

- **The role of the educator; (as an observer; facilitator; co-learner etc.)**
- The educator acted as a facilitator and participant by playing the role of goalkeeper.
- The educator encouraged the children to try again and adjust their kicks.

Consider the image of the child as "competent, capable of complex thinking, curious and rich in potential" (OMEd, 2014a, p. 6):

- Describe one (1) **strength** derived from *Excerpt's from E.L.E.C.T.'s* (OMEd, 2014b) continuum of development example as follows:
  - **Choose only one of the following developmental domains (**physical, cognitive, social/ emotional, communication, language and literacy), **skill reference #** and provide evidence from your observation to support your choice

    Physical Domain – 5.3 Gross Motor Coordination

    During the soccer activity, the children used coordinated large body movements while running, positioning their bodies, and kicking the ball toward the goal. They adjusted their balance, force, and direction during repeated attempts, which showed control of gross motor movements throughout the game.

- Describe **1 one opportunity for growth** derived from either your Development Courses (114, 124 and 244) or *Excerpt's from E.L.E.C.T.'s* (OMEd, 2014b) continuum of development example as follows:
  - **Choose one of the following developmental domains (**physical, cognitive, social/ emotional, communication, language and literacy), and **one skill reference #.** and provide evidence from your observation to support your choice.

    Social Domain – 1.3 Co-operation

    The soccer activity created opportunities for children to further develop co-operation skills while taking turns, waiting for the ball, and participating in the game with peers and the educator. Children could continue strengthening these skills by encouraging one another and working together during shared play experiences.

FULLY DETAILED, INTENTIONAL RESPONSE INCLUSIVE EXPERIENCE
(What will you do?)

Collaborate with your Mentoring Educator about your plan. Get their feedback and approval. Communicate and share your final plan with your Mentoring Educator and have them sign this section before implementing the planned experience the following week.

YOU MUST RECORD ENOUGH DETAILED STEP BY STEP PLAN IN ORDER TO COMPLETE A WELL THOUGHT OUT LESSON

Complete the following section in point form :

Reflect and describe the following:

- **Give your Responsive Inclusive Planned Experience a Title/name,**
  -Space Mission Jump Challenge

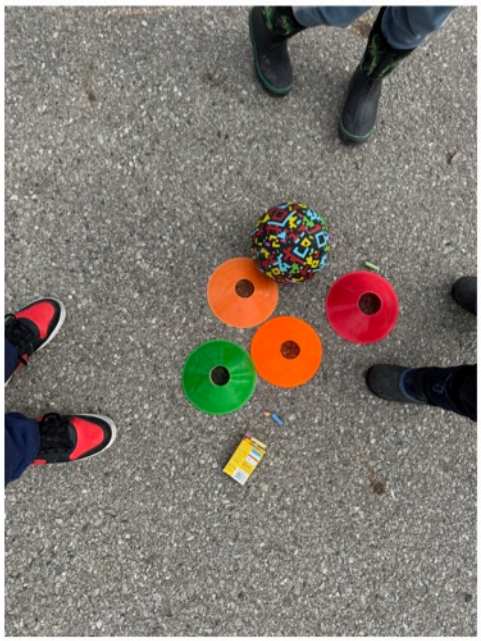
- **What will you do? Your plan must show the step-by-step process of the experience.**
  • I will invite the children to participate in a space-themed jumping activity during outdoor playtime.
  • Using chalk, I will guide the children to draw circles on the playground path representing planets such as Earth, Moon, Mars, and Sun.
  • I will explain that they are astronauts completing a space mission.
  • Children will hold a small ball (spaceship) while jumping from one planet to another following the path drawn on the ground.
  • If the child drops the ball or misses a planet circle, they will restart the mission from the beginning.
  • Children will take turns completing the challenge and may try again to reach the final planet.

- **When will you do it? Why? Time/Duration:**
  Date: Thursday, March 12, 2026
  Time: 4:00 p.m.
  Duration: Approximately 25–30 minutes
  This time was chosen because it takes place during outdoor playtime when children are active and able to participate in movement-based activities before transitioning to the next routine.

- **Where will you do it? Why?**
  This activity will take place on the playground path area, where there is enough space for children to safely move and jump.

- **What materials are you using that were in the initial observation and what new materials are you adding to your experience?**
  Chalk, a small ball (spaceship), open playground path space, and cones or markers to indicate the jumping path if needed.

- **Must include at least 1 photo** (before, during, or after) of the experience.



Before

During

After

Reflect on the following:

- **How does your intentional responsive experience connect to your observation and interpretation? Refer to the:**

- **interests(s),**
  During the observation, children showed strong interest in active physical play while kicking the soccer ball and attempting to score goals. They appeared motivated and excited when participating in movement-based play.

- **strength,**
  Children demonstrated coordination, balance, and body control while kicking the ball and moving around the play space during the soccer activity.

- **opportunity for growth you identified in your interpretation.**
  Based on this observation and interpretation, the planned **Space Mission Jump Challenge** will respond to the children's interest in movement and physical play by providing another active experience. In this activity, children will jump between chalk-drawn planets while holding a "spaceship" ball, which will support the development of balance, coordination, and body control.

- **What role will you, as a co-learner, have in your planned response? Identify one (1) teaching strategy you will use and describe how it relates to the observed interest, strength and opportunity for growth identified in the interpretation.**

  Teaching Strategy: Modeling

  • As a co-learner, I will model how to complete the Space Mission Jump Challenge by demonstrating how to jump from one chalk-drawn planet to another while holding the "spaceship" ball.
  • This strategy supports the children's observed interest in movement and physical play while helping them practice balance, coordination, and body control.
  • I will encourage children to try the activity in their own way and provide positive feedback as they attempt the jumping path.

- **How is your plan responsive inclusive? Discuss one (1) of the following Foundations for Learning from *How Does Learning Happen?* (OMEd, 2014a): Indicate which foundation you are connecting your plan to. You must paraphrase, site your work and include the page number.**

  Engagement *(How Does Learning happen?, 2014, p. 35)*

  • This planned experience connects to the foundation of Engagement because it builds on the children's observed interest in active physical play.
  • The space-themed jumping challenge invites children to participate in a playful movement activity where they can explore coordination, balance, and problem solving while completing the "space mission."
  • According to *How Does Learning Happen?*, engagement occurs when children are actively involved in experiences that connect with their interests and curiosity.

SIGNATURE REQUIRED HERE FROM MENTORING EDUCATOR, PLAN IS REVIEWED AND APPROVED FOR IMPLEMENTING NEXT PLACEMENT DAY:

Mentoring Educator's Signature: _____

Date signed: **March 05, 2026**

A grade of 0 will be given in the Planned Response, if the Mentoring Educator does not sign this section.

REFLECTION ON EXPERIENCE
(What happened?)

This follow-up reflective extension is based on what happened when you implemented your initial experience. What have you learned and what you will do next to extend your initial planned experience?

Complete the following section (point form is acceptable):

Reflect on the following:

- **How did your planned response support your anticipated focus? Refer to the interests(s), strength and opportunity for growth you identified in your interpretation.**
  • The planned activity supported children's interest in active physical play by providing a movement-based space mission challenge.
  • Children were able to use their coordination and body control while jumping between the chalk-drawn planets.
  • The activity also supported the opportunity for growth by encouraging children to practice balance and control while holding the ball and completing the jumping path.

- **What happened when you implemented your experience?**
  • Children were interested in the space mission theme and participated in the jumping activity on the playground path.
  • They took turns jumping between the chalk-drawn planets while holding the "spaceship" ball.
  • Some children needed to try the activity more than once when they missed a planet circle or dropped the ball.

- **What did you learn?**
  • I learned that children respond positively to movement-based activities that connect to imaginative themes such as space missions.
  • I also learned that providing clear instructions and demonstrations helps children understand the activity and participate confidently.

- **What are some things you did to present new challenges to the child/children as you were interacting with them?**
  • I encouraged children to jump to planets that were placed farther apart.
  • I invited children to try completing the mission again while maintaining balance and control of the ball.
  • I supported children by encouraging them to attempt the challenge multiple times.

MENTORING EDUCATOR'S FEEDBACK

A grade of 0 will be given if the initial experience and extension is not implemented to the children in the classroom.

PRINT THIS DOCUMENT FOR THE Mentoring Educator's Feedback and signature for this section.

- ❑ **Yes, learner implemented the initial Experience.**
- ❑ **No, learner DID NOT implement the initial Experience.**

Mentoring Educator's Signature: _____ **Date:** **March 12, 2026**
